HP 8922H

HP 8922A/B/F/H GSM Test Sets

The HP 8922A, 8922B, 8922F, and 8922H are integrated test solutions for the production and servicing of GSM900 and DCS1800 radios. These test sets are based on a common, expandable platform. Hewlett-Packard is working on new test sets based on this platform to meet your expanding digital radio measurement needs. The HP 8922A is a tool box with the necessary hardware to test the RF characteristics of GSM modules. For base station testing, the HP 8922B builds on this platform by adding a large memory and reference section to provide baseband data patterns to control the built-in 0.3GMSK source. The HP 8922F is a standalone GSM mobile station tester. It includes a GSM base-station emulator and all the signaling capability to fully test a mobile without additional equipment. For manufacturing applications, the HP 8922H adds high-speed testing and additional flexibility to maximize production throughput.

Minimize Production/Service Testing Costs

The HP 8922H is built for manufacturing, with accurate and repeatable measurements. it provides the minimum test times under HP-IB remote control. The HP 8922F is tailored to the demanding needs of incoming inspection and mobile repair. It has all the ingredients necessary to minimize the cost per phone, a rich set of features which balances fast testing with a built-in toolkit of instruments and automatic test software. Features are bound together with an intuitive menu-driven user-interface. Sharing a common RF measurement architecture, the HP 8922F/H guarantees consistent test results during each stage of a phone's life: minimizing the chances of good phones being rejected at incoming inspection, maximizing the quality of new and repaired phones. Both products are developed from the industry standard HP 8922G.

GSM Radio Test Solutions

The HP 8922 contains a complete set of instrumentation for testing the RF sections of GSM radios. In addition to the frequency agile 0.3 GMSK RF generator, the RF analyzer has an agile local oscillator, coherent data demodulator, pulse demodulator, FM demodulator, global method analyzer for phase and frequency error, synthesized spectrum analyzer, and pulsed power meter. The HP 8922B adds a large programmable RAM and phase-lock-loop timing generator for generating long GSM data patterns. The HP 8922F/H adds a bit-error-rate tester (BERT) for performing GSM receiver measurements, channel CODEC, and call control protocol to setup a phone call and maintain the link while performing measurements. Echo mode is facilitated by the voice CODEC for functional testing of a mobile, and the electrical man-machine interface (EMMI) is implemented for controlling the mobile and supporting the digital audio interface (DAI).

Complete Tool Set

Aside from their complete complement of GSM measurements the HP 8922 contains general-purpose tools useful for module test troubleshooting, and debugging activities. These tools include a digital oscilloscope, CW RF synthesizer, spectrum analyzer, CW RF frequency counter, CW and peak RF power meter, ac voltmeter, dc voltmeter, 1 kHz distortion/SINAD meter, audio frequency counter and synthesized audio source. The sum of these capabilities makes the HP 8922 an extraordinarily powerful tool for the manufacture installation and repair of GSM radio equipment.

HP 83212B GSM/DCS1800 Mobile Test Software

The HP 83212B is an easy-to-use software solution for automatic testing of GSM900 and DCS1800 mobile stations. Running on the HP 8922F/H's built-in I-BASIC controller, the HP 83212B offers a comprehensive set of tests ideal for incoming inspection and repair of GSM phones. Its flexibility and modularity allow you to select and change test sequences, test parameters, and pass/fail limits without programming expertise. Procedures can be simply saved on RAM cards and distributed to colleagues, guaranteeing consistent test methods. All test results are displayed on the screen and can be documented with hard-copy printouts when an external printer is added. Three levels of testing are available with the HP 83212B: manual mobile station troubleshooting, quick functional checkout, and full parametric testing. Automating your measurements provides repeatable results while allowing the user to test more mobile stations in less time. This increase in throughput lowers your testing cost.

HP 83220A/E DCS1800 Test Sets

The HP 83220A expands the capabilities of the HP 8922 test set family to comprehensively test DCS1800 radios across the band 1710 to 1880 MHz. All the features of the RF generator, RF analyzer, and general instrumentation of the HP 8922 are retained. For cost-effective mobile testing, the HP 83220E extends the range of the HP 8922F/H for DCS1800.
